The traces shown above represent the following: RED the original sound analysis with original bridge, as setup by the expert luthiers at Kohr violins. This is exactly how it played when I unboxed it and tuned it and played it. The YELLOW line shows the final analysis as I was able to obtain with no less than 18 modifications to a new bridge and a new position on the violin body itself. The BLUE trace shows my 90 yr OLD German violin after weeks of 'tweaking and fine tuning' and several bridges being made and carved ever so slightly different to obtain this smooth trace. As you can see, all my work has paid off and this is now an instrument worthy of being in my stable of fine instruments. July 9, 2012 cdennyb
