REVISED EDITION

WITH FINGERING, BOWING VARIANTS, AND EXPLANATORY REMARKS

BY

EUGENE GRUENBERG

Book II. Twenty Studies in the Second, Third, Fourth and Fifth Positions.

The Studies for the Violin, Op. 32, by Hans Sitt occupy a conspicuous place among the excellent works of the present day. As with the majority of violin exercises, they are principally devoted, according to the author's statement, to the development of the left hand. In preparing this new and revised edition the editor has therefore sought to offer the student an exhibition of all desirable varieties of bowing.

It is evident that these exercises, although originally planned for beginners, will also be of great value to the advanced player, giving him a welcome chance of practicing even the most difficult varieties of bowing under as agreeable and comfortable conditions as may be.

In the last four exercises of the first book the dashes, indicating which fingers are to be kept down, have been intentionally omitted, in order to allow the pupil to prove on the spot how well the disciplining of the fingers has succeeded in making him observe one of the most important, and also most neglected, rules of violin playing.

Naturally the variants of bowing will have to be selected in every case according to the particular grade and ability of the pupil.

Eugene Greenberg

Boston, February 1, 1905.

EXPLANATION OF SIGNS
AND HINTS IN REGARD TO BOWING

--- The short dash, applied to single notes, calls for a sustained stroke with little bow.

Several dashes, connected by a slur, indicate a sustained staccato.

Dots, indicating a short and dry tone character, are used in connection with the following strokes: Hammered, artificial spiccato, natural spiccato, hammering spiccato, and when connected by means of a tie or slur, also the following: Staccato, ricochet, French (flying) staccato, tremolo, and arpeggio. Dots, connected with a slur, mean, as a rule, staccato, unless otherwise indicated.

The combination of dash and dot means simply a sustained stroke, slightly abbreviated, before the next note is begun. This is accomplished by a quicker stroke and by an instantaneous halting of the bow after each note, without lifting it from the string.

When connected by a slur, the dotted dashes mean a sort of sustained staccato, viz., a little drier in character than that mentioned above.

To retain a finger (hold it down), after it has been used, e.g.:

To place a finger simultaneously on two strings, e.g.:

WB Whole bow.
UB Upper bow.
LB Lower bow.
MB Middle bow.
Pt. At the point.
Fr. At the frog.

THE STROKES AND THEIR CHARACTERISTICS

Sustained. Of a singing, mellow, carrying tone character.

Hammered. Short, dry, explosive, heavy tone character.

Artificial spiccato. Short, elastic, light-weight tone character.

Natural spiccato. The same, still lighter tone character.

Legato. Of a sustained tone character.

Semi staccato. Half-legato.

Staccato. Brilliant, fascinating tone character.

Hammered spiccato. Violent, powerful, clumsy tone character.

Arpeggio. There are only three kinds of fundamental strokes: The sustained (or singing), the hammering, and the springing stroke (spiccato). All the other strokes are either modified or combined derivations.
This book is devoted to the introduction of two new elements, shifting and sliding. It did not appear, therefore, advisable to increase difficulties by a display of many bowing variants, but to select only a few of the simplest character.

Only the student who is well acquainted with the first five positions, as exhibited in Book II, will be able to solve successfully the two problems mentioned above.

A brief explanation of the terms position and shifting, as well as a few leading hints in regard to the hand’s attitude in the different positions, having been given in the second book, it remains now to throw some light upon the two tasks confronting the student in this volume.

In shifting, the hand must be moved as a whole, and without bending the wrist, together with the forearm, from the elbow joint.

A very important and characteristic feature of the shifting is the sliding of the finger tips. The action of shifting is not necessarily, although often, connected with the action of sliding. The latter, however, is to be treated differently in different cases, depending on the question whether it is to be merely a means of shifting, or an intended effect.

In the first case, the finger tip entirely avoiding any hard pressing during the action of sliding, the result appears to be more a sort of skipping than of sliding; for the latter becomes almost imperceptible to the ear, owing to the hand’s sudden shifting and the finger’s light-weight action.

It is quite different in a case where a so-called sliding effect is demanded. Then the process of sliding requires a more or less increased pressing power of the finger tips—more in passages of a passionate nature, less in others. It is easy to understand that the shifting process of the hand will be considerably slower in a sliding effect than in a mere change of position, which, as hinted before, is executed by a very sudden, skilful motion.

The sign indicating a sliding effect is a line, either straight or curved, applied to a figure corresponding with the finger to be employed.

It is customary to place this line before as well as after, and also above or below the figure indicating the sliding finger.

There are three kinds of sliding effects in use:

1. The finger, applied to the first note, is sliding, after which some other finger, somewhat hitting the string, will occupy the place of the second note, e.g.:

2. Both notes being played with one finger, the same finger will, of course, produce the sliding, e.g.:

3. The sliding is done by the finger devoted to the concluding note, e.g.:

Making audible the note at which the sliding finger begins its action must be avoided.

When the two notes, connected by a portamento (viz., sliding effect), are not slurred, the second stroke must include the portamento, e.g.:

The difficulty here arises from the fact that the second stroke must really begin with the sliding, without making audible the little grace notes which are printed above. In the first attempts, however, it will be well to play the grace notes distinctly.

As a general rule it is advisable not to press too hard with the sliding fingers, and to hold the same considerably less vertical than usual, in order to bring the lower, fleshier part of the finger tip in touch with the string.
